Monitoring and analysis of Workflow applications: a domain-specific language approach

Autor

Oscar González

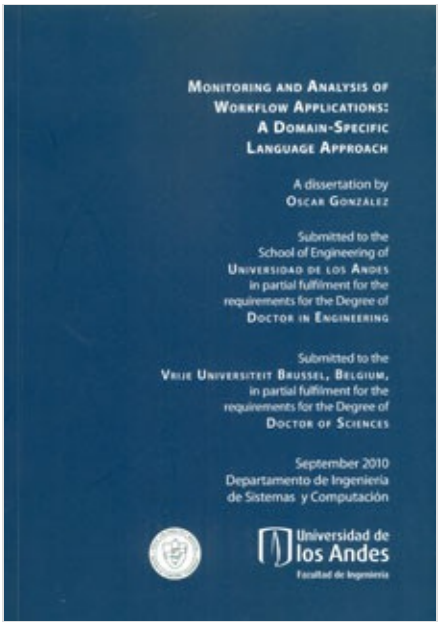

Sinopsis

The increased focus of companies on improving their operational efficiency has raised a demand for advanced systems to support the continuous monitoring and measurement of business activities. These business activities are typically automated into workflow applications. The monitoring and measurement solutions aim at giving organizations the opportunity to focus on process improvement by detecting problematic properties during the execution of workf1ow applications. The focus of this research is to raise the level of abstraction for workflow developers for monitoring and measuring workflow applications.
