Sinopsis

The current book observes and studies the diverse factors of inequality accumulated as determinants for the youth. These factors, individual and structural, have a differential impact on the construction of the youth self and their course of life. The broad social class inequality sums up with others like the ones of gender and ethnicity, and within contexts of poverty, marginalization, exclusion and lack of rights. We analyse what determines the possibilities of free choice, agency, and real possibilities for a maximum development of potential capacities in young people within a very unequal environment. Because being young interacts within a series of factors and experiences that determines its individual and collective self. Our collective study unveils, from a critical perspective, precarious conditions of vulnerability within unequal scenarios for the youth. This study is the result of further thinking on the importance of age analysis as a fundamental variable in the study of inequalities, from an intersectional and multidimensional perspective. In other word, we search to include “social, cultural, subjective dimensions, traditionally excluded from classical studies about inequality” (Saraví, 2015, p. 15).
